Liz Easley, USACE	

A summary of key discussions, issues and decisions/actions is presented below.

1. Groundwater Remediation Project Update

- HCPP System operation is proceeding smoothly and has treated over 16 million gallons of extracted groundwater since operation began on 01 July 2006 (**see attached handout**).
- The most recent influent sample for which we have laboratory results was collected on 13 March and detected TCE at a concentration of 2 µg/L. The effluent concentration remained at “non-detect” (the method detection limit is 0.5 µg/L).
- Based on the measured flow rates and TCE concentrations, the system has removed approximately 0.7 pounds of TCE since operation began.
- The average total pumping rate has been approximately 37 gallons per minute (gpm)

2. Quarterly LTM Status Reports

- The 4<sup>th</sup> Quarter and Annual 2006 Groundwater Monitoring Report is in preparation and is tentatively scheduled to be submitted by the end of the month
- HGL personnel will be conducting 2<sup>nd</sup> quarter 2007 groundwater sampling during week of 21 May 2007.

3. FONR Construction

- Received requests for proposals back from subcontractors and anticipate contracts will be sent out by end of this week.
- FONR Construction kickoff meeting is scheduled for 04 June 2007 at MBEST Center.
- HGL anticipates mobilization beginning on 05 June 2007 unless FONR threatened & endangered species issues cause delay.

That concluded the discussion of HGL efforts on OU-1. The next meeting is scheduled for 22 June 2007 at 1:00 PM.
