Separate minutes will be provided by HGL.

OU 1 Off-Site

Shaw issued a field work variance on 2/16/09 to shut down the groundwater treatment system and start the rebound study since all monitoring and extraction wells are below the ACL. FOEJN submitted comments on the field work variance. The groundwater treatment system was shut down and the rebound study was initiated on 2/17/09. Monthly sampling will be conducted until June 2009 and then sampling will be quarterly. A handout was provided.

OU2 – The system operated with an average flow of 644 gallons per minute (gpm) in February 2009.

Sites 2/12 –The system operated with an average flow of 192 gpm in February 2009. A handout was provided.

EPA has no comments on the Sites 2/12 Construction Completion Report.

Other Groundwater Issues

Groundwater Sampling – The next sampling event started 3/9/09. The Mini-Storage well was not available for sampling.

All information submitted to the RWQCB needs to be uploaded into the Geotracker system. Any specific questions should be emailed to support staff at geotracker@waterboards.ca.gov, or if your questions require discussion, ask the staff member responding to your email for their phone number.

The Draft Annual Report of Quarterly Monitoring October 2007 through September 2008 is scheduled to be submitted in late April. The report will include recommendations to reduce sampling frequency of monitoring wells which meet the established criteria for reduction. It will also include a comparison of total depth measurements from Sept 2008 to the original depth at the time the well was installed.
