

HGL Update
Fort Ord Operable Unit (OU) – 1 On-Post Groundwater Remediation
Marina, California
1:30 p.m., 18 July 2013

1. Groundwater Remediation System Update

The Northwest Treatment System (NWTS) operated continuously from 08 June through 18 July 2013. Extraction wells EW-OU1-60-A, EW-OU1-66-A, and MW-OU1-87-A operated continuously during this period with total pumping averaging 20.8 gallons per minute. Since system startup in 2006, the NWTS has pumped approximately 199 million gallons of groundwater and removed approximately 5.9 pounds (0.49 gallon) of total volatile organic compounds, primarily trichloroethene (TCE). An estimated 0.009 pound of TCE has been removed since the NWTS 27 March 2013 sampling event.

On 26 June 2013 HydroGeoLogic, Inc. (HGL) collected samples from the following extraction well and two monitoring wells:

MW-OU1-87-A

MW-OU1-61-A

MW-OU1-88-A

2. Long Term Monitoring Update

Validated sampling results from the March 2013 sampling event are presented in attached Tables 1A and 1B for extraction wells MW-OU1-87-A, MW-OU1-66-A, and EW-OU1-60-A. Figure 1 shows the TCE concentration contours based on the validated March 2013 data. The attached TCE concentration figure will be updated after the validated results from the 26 June 2013 sampling are received and reviewed.

As shown on the attached Figure 1, groundwater concentrations in the March 2013 samples exceeded the TCE Aquifer Cleanup Level (ACL) only in monitoring wells MW-OU1-61-A and MW-OU1-88-A (well identification highlighted in yellow). The latter well remains slightly above the ACL, decreasing from 7.8 micrograms per liter ($\mu\text{g/L}$) in February 2013 to 6.8 $\mu\text{g/L}$ in the March 2013 results. MW-OU1-61-A, the only well exceeding the ACL on the northwest boundary, decreased from 15 $\mu\text{g/L}$ in February 2013 to 13 $\mu\text{g/L}$ in the March 2013 results. None of the Fort Ord OU-1 chemicals of concern was detected in wells MW-OU1-69-A2 and MW-OU1-70-A.

The TCE concentration (4.8 $\mu\text{g/L}$) in well MW-OU1-87-A, the only extraction well exceeding the ACL in recent sampling results, dropped below the ACL for the first time since sampling began in 2006. Concentrations in the other sampled extraction wells were consistent with previous results of nondetect or less than 0.5 $\mu\text{g/L}$ (see Table 1A).

3. Report Submittals

All scheduled submittals have been made for primary and secondary deliverables. The status of submitted and anticipated reports for 2012 and 2013 is summarized in Table 2. The groundwater sampling report for the 2013 first quarter monitoring report was distributed 1 July 2013.

4. Discussion Agenda

(A) Weed Control

HGL renewed the agreement with the University of California Santa Cruz (UCSC) to perform weed control in selected portions of the Fort Ord Natural Reserve in 2013. The number of sites to be addressed is based on the results of previous monitoring and the habitat types observed during the

Army/UCSC field inspection on 28 March 2013. Weed control activities began in April and are continuing.

(B) Rare Plant Survey

The 2013 rare plant survey was conducted from 12 April through 16 April 2013.

Action Items:

Ongoing:

- Submit draft minutes for previous Base Closure Team (BCT) meeting(s)—draft June meeting minutes were submitted on 01 July 2013.
- Submit final minutes for previous BCT meeting(s) (February, March, and May 2013)—up to date.
- Submit draft minutes for current BCT meeting.

- (13.5ft. - 13) Jan/Feb/March 2013 TCE Result (µg/L)
- 5- TCE contour based on March 2013 Data
- - - Trail/Unimproved Road
- × Fence
- Treated Water Infiltration Trench
- Property Boundary
- Building
- ▨ Former Fire Drill Area

Notes:
 Units of TCE concentration are in micrograms per liter.
 FONR = Fort Ord Natural Reserve
 NWTS = Northwest Treatment System
 ACL = Aquifer Cleanup Level
 ND = nondetect
 NA = Depth is not applicable - sample is from pumping well
 µg/L = micrograms per liter
 Wells shown with an asterisk were not used to develop contour boundaries.
 Wells for which no data are posted were not sampled.
 J = Estimated value
 Green font indicates extraction or injection well.
 Italicized font shows pumping suspended.
 † = Disconnected extraction well. No longer operable.
